SUMMARY

Computer Engineering graduate (**Rank #1, CGPA 3.94/4.00**) who builds agent systems and the backend services behind them. Shipped a real-time voice agent handling **200+ calls a day** with retrieval under **10 ms**. Fine-tuned Llama-3.2-3B from **2.62% to 71.69%** exact match, and built a drift-aware MLOps service with **55 tests** and CI.

EDUCATION

The University of Lahore | BSc Computer Engineering | Lahore, Pakistan **Oct 2022 - Sep 2026**

- **Gold Medalist and Department Rank #1** (highest CGPA in batch, 3.94/4.00). Fully funded Allama Iqbal Scholarship.
- **Certifications:** Deep Learning and Machine Learning Specializations (DeepLearning.AI). **Languages:** English, Tamil (native), Sinhala, Urdu.

TECHNICAL SKILLS

Languages: Python, C++, JavaScript, SQL, Bash

Agents and LLMs: LangGraph, LangChain, LangSmith, tool calling, multi-agent workflows, RAG, prompt engineering, LLM evaluation, QLoRA/LoRA, AWQ quantization, vLLM, Hugging Face

Backend and Systems: FastAPI, Node.js, Express, REST APIs, microservices, Pydantic, SQLAlchemy, JWT/RBAC, Docker, GitHub Actions CI/CD, Pytest, Linux, LiveKit, WebRTC

Data and Retrieval: PostgreSQL, MySQL, MongoDB, FAISS, ChromaDB

MLOps and ML: MLflow, drift detection (PSI, KS), champion/challenger gating, PyTorch, scikit-learn, Stable-Baselines3

PROFESSIONAL EXPERIENCE

AI Intern | Artificizen | Lahore, Pakistan (Onsite) **Jan 2026 - Jul 2026**

- Delivered a real-time voice agent handling **200+ calls per day**, by orchestrating Gemini and Grok LLMs in LangGraph and LangChain workflows on Retell, Dograh (Docker), and LiveKit.
- Kept vector retrieval **under 10 ms** during live audio streams, by building FastAPI microservices on PostgreSQL (Neon) and MySQL with FAISS and ChromaDB search.
- Cut failed workflow runs by **5%** across client projects, by testing multi-agent graph workflows. Wrote the architecture blueprints and technical documentation that aligned clients on design.

Full-Stack Developer Intern | Pinnacloid | Lahore, Pakistan (Onsite) **Aug 2025 - Oct 2025**

- Cut endpoint latency by **25%**, by optimizing **12+ REST routes** and retrieval queries behind real-time RAG workflows.
- Fixed **30+ critical production bugs**, by leading Node.js backend orchestration for cross-team feature integrations.
- Shipped LLM-integrated features to production on a MERN stack (Node.js, Express, React.js, MongoDB).

Machine Learning Intern | Arch Technologies | Remote **Jun 2025 - Jul 2025**

- Reached **87.2% mAP@0.5** on held-out data, by training a YOLO11 brain tumor detector on a 5-class dataset.
- Adapted Llama-3.2-3B to healthcare tasks, by using prompt engineering and medical Chain-of-Thought datasets, and built agentic workflows with vector retrieval and voice-cloning services.

PROJECTS

FT-Bench: LLM Fine-Tuning and Quantization Benchmark | QLoRA, AWQ, vLLM, FastAPI

- Raised exact match from **2.62% to 71.69%** (Slot F1 16.41% to 85.34%) on 2,974 held-out samples, by fine-tuning Llama-3.2-3B-Instruct with QLoRA on 11,481 MASSIVE samples.
- Cut VRAM by **39%** (6.2 GB to 3.8 GB) at 72.19% exact match, by applying AWQ INT4 quantization. Served with FastAPI and vLLM, with 34 tests, CI, and 3 Hugging Face checkpoints.

ML-Ops-Live: NYC Taxi Trip-Duration MLOps Platform | scikit-learn, MLflow, FastAPI, SQLAlchemy

- Cut holdout MAE by **14.1%** (2.75 vs. 3.20 min) over a Ridge baseline, by training gradient boosting on 102,189 taxi trips in MLflow.
- Built a FastAPI monitoring service with PSI/KS drift detection and drift-triggered retraining, with champion/challenger gating and rollback, under **55 tests** and CI. Verified a 38.6% MAE drop in a drift simulation and 292.4 ms P95 latency in local load tests.

AI Travel Planner Agent | LangGraph, Groq, Tavily, FastAPI, RAG, JWT

- Handled **10+ user constraints** across multi-turn itineraries, by building a LangGraph agent with Groq LLMs, Tavily search, human-in-the-loop plan checks, and LangSmith tracing.
- Delivered a FastAPI backend with RAG retrieval, weather and exchange-rate integrations, and JWT auth with RBAC.

Document RAG System | LangGraph, FAISS, Hugging Face Transformers

- Scored **0.88 faithfulness and 0.84 context relevance** across 50 test queries, by building a FAISS RAG pipeline with a LangGraph rerank, generate, and evaluate loop.

Multi-Agent Disaster Response Simulation | Deep RL, Stable-Baselines3, Streamlit **1st Place, Dept. Open House**

- Cut simulated response time by **15-20%** on 50+ node OpenStreetMap networks, by training a multi-agent deep RL system.
